Continued

DRIFIRE® FR/AR clothing is already designed oversized to fit over daily workwear. You should take your actual body measurements using a fabric measuring tape. Measuring while wearing daily workwear will cause you to order a garment that is too large.

Measure accurately and choose a garment size (SM, MD, LG, XL, 2X, 3X or 4X) based on your widest actual physical measurements. The size chart measurements are body measurements to help determine what size garment you should order. If your measurements fall between sizes, it is recommended that the larger size be purchased. Always round up to the larger size if your measurements fall between categories.

How to Measure (with assistance)

Chest

- Stand up straight with your arms relaxed at your sides.
- Have your assistant measure around the fullest part of your chest, under your arms and across your shoulder blades, ensuring the tape is level.

Waist

- Placement: Wrap the measuring tape around your natural waistline, which is typically the widest part of your stomach near the navel.
- Tension: Keep the tape snug but flat against your body. Do not pull it tight or suck in your stomach.
- Rule of Thumb: If your stomach area is wider than your actual waist/hips, always use the largest measurement to ensure the Bib Overalls can button up fully over your torso.

Tip:

Having someone else take your body measurements is wise because it ensures greater accuracy, maintains proper posture and prevents tape skewing.
