National Safety Apparel (NSA) measurements are true-to-size fit, meaning garments are engineered to correspond accurately to your actual body measurements, while built-in functional ease is added automatically to account for safety protocols and active movement on the job. Because NSA specialises in FR/AR PPE, their definition of a true-to-size fit prioritises safety compliance over fashion aesthetics.

You should take your actual body measurements using a fabric measuring tape. Measuring while wearing daily workwear will cause you to order a garment that is too large. Measure accurately and choose a garment size (SM, MD, LG, XL, 2X, 3X, 4X or 5X) based on your widest actual physical measurements. The size chart measurements are body measurements to help determine what size garment you should order. If your measurements fall between sizes, it is recommended that the larger size be purchased. Always round up to the larger size if your measurements fall between categories.

How to Measure (with assistance)

Chest

- Stand up straight with your arms relaxed at your sides.
- Have your assistant measure around the fullest part of your chest, under your arms and across your shoulder blades, ensuring the tape is level.

Waist

- To measure your waist you need to wrap a flexible measuring tape horizontally around the widest part of your midsection or your natural waistline.
- Because Class 2 safety vests require minimum areas of background and retroreflective materials to meet strict compliance standards (such as AS/NZS 4602.1 or ANSI/ISEA 107) the vest must fit fully around your torso without riding up or failing to close.

Centre Back Length

- Measure vertically from the base of the collar at the back of the neck straight down to the bottom edge hem of a well-fitting Shirt (preferably with an extended hem for enhanced coverage).

Having someone else take your body measurements is wise because it ensures greater accuracy, maintains proper posture and prevents tape skewing.
